ERP

Back Office Productivity Solutions for *Sage 300 ERP*

Do you buy or sell goods and services to related companies? Do you transfer cash or allocate expenses or revenue across multiple companies or Funds? Do you want to process payments or cash receipts electronically to avoid cheque fraud and identity theft? Do you struggle to reconcile your bank statement, manage inventory movement and purchasing or run processes like Data Integrity Checks, backups, posting batches or Day End? If you answered “Yes!” to any of these questions this session will show you how to make managing these processes and transactions in Sage 300 ERP easy.

Is your web store truly integrated? - E-Commerce for *Sage 300 ERP*

A look at what Connected eCommerce means in 2015. A 2014 IDC report described the web store of the future; a web store Iciniti began pioneering in 2010. Led by industry experts in eCommerce solutions, this session will delve into the true meaning of integration and connectivity as it relates to customers’ eCommerce experience. Being connected no longer means just integration to the ERP, but connectivity to a WCMS, Social media, CRM, POS, and of course, secure credit card processing.

Managing Information & Documents in *Sage 300 ERP*

Managing the flow of documents and information within your organization can be a daunting task. However, centralizing the storage and retrieval of this information within 1 database has tremendous value for organizations looking to avoid duplication of effort and providing support for transactions and processes within their ERP system. The ability to attach documents, text notes or images to your Sage 300 ERP screens and automating the generation and distribution of Crystal or FR reports or streamlining the budget process in your organization is possible. This session will show you how.
